

More Than a Photo Book

StayingMe is all about preserving memories, preserving identity, preserving you.

For Carers

We have a number of products aimed at helping carers of all kinds - from relaxation to organizational tools. While a loss of identity is frequently associated with dementia, carers are also gravely at risk of losing their identity, of knowing who they are.

For those with Dementia

To help rediscover and reinforce older memories, we have Memory Books, the Memory Game as well as other memory recall aids. We also have items such as our Bonding Bears to help improve emotional condition.

Memories Trigger Memories
Stimulate Recall
Lasting Legacy for Family
More Than a Photobook

A life story that grows with every reading.

Photobooks are wonderful records of the past but often fail to stimulate memories and may even just frustrate or irritate when people and events evade the memory.

Our Memory Books are active stimulators of memory - matching targeted questions with visual triggers to draw on an individual's life experiences in order to rediscover and reinforce long term memories.

These recalled memories can then be journalled in the Memory Book in order to reinforce and re-stimulate memories in subsequent readings.

Because Memory Books are tailored to the life story of the dementia sufferer, each one is individual and unique. Additional copies can be produced as reduced cost and make a wonderful long-term testament to a loved one's life.

Did you know?

Memories are often linked - one memory can trigger another. By recording memories additional ones can be recalled.

Unique

Just as every life is unique, so is every Memory Book. But we can print extra copies - a wonderful gift for family & friends.

Other things of to look at:

- ◆ The Memory Game
- ◆ Bonding Bears
